About Saving Lives
in Your RV and While on the Road

Sudden Cardiac Arrest (SCA) Knows NO Boundaries!

In Australia approximately 30,000 people sustain a Sudden Cardiac Arrest (SCA) outside of a hospital and are treated by emergency medical services (EMS) each year.

That's 575 Australians suffering a SCA every week and ONLY 1 out of 10 WILL SURVIVE!

The Facts

- ♥ **An average of only 9% of its victims in Australia survive!**
- ♥ It can happen anytime, anywhere and to anyone, even young athletes.
- ♥ **Early defibrillation is the single most effective treatment for SCA.**
- ♥ Defibrillation within three minutes of collapse can increase the chance of survival to over 70%.

Three Steps to Save a Life

1. CALL 000

2. PUSH

3. SHOCK

Save Lives in Your RV with our Heart Safe RV Program

Are YOU READY, WILLING and ABLE to potentially SAVE a LIFE in Your RV?

Our [Heart Safe RV Program](#) from Heart Safe Australia is to raise awareness and education of the vital function that defibrillators can perform in potentially saving lives in RVs across Australia.

Defibrillators are basically a "Doctor in a box" analysing the patient's condition and providing guidance for CPR and importantly shocking the patient to restart the heart if required.

JOIN our [Heart Safe RV](#) program to be guided and supported to make sure you and the people around you are **READY, WILLING and ABLE** to potentially save a life in case of a Sudden Cardiac Arrest (SCA) outside a hospital.

Whether you are familiar with the 3-Steps to save a life and already have a defibrillator or AED, join our Heart Safe RV programs to make sure you and the people in your RV are **READY** for such potentially very stressful life and death situation.

Heart Safe RV Checklist to Potentially Save Lives in RVs

Audit/Check list to become a Heart Safe RV:

- ♥ There is a Defibrillator in the RV with the appropriate signage
- ♥ There are an Automated External Defibrillator (AED) Policy & Procedure made aware and available to the RV owner?
